

INDUSTRIAL

PIPE BEDDING SAND

Pipe Bedding Sand is a washed material produced from our Two Oaks Quarry. It is a fine grade sand making it perfect for backfill, a free-flowing sand that surrounds the pipes and cables effortlessly, making installation easier and stone/aggregate free.

The sand dissipates heat rapidly – keeping underground pipes cool. The sand retains a consistent grading – no movement once compacted.

It can also be used as a fill sand for many projects, often used as a base for concrete and to fill around septic tanks.

It is also an option for landscaping projects which involve creating pools or waterfalls.

Benefits:

- Cost effective (premium quality sand)
- Consistent grading
- Fill Sand/Trench Backfill Fill sand is perfect for just that – filling
- Free from contaminants and aggregates
- **Available in bulk bag & loose**
- **Can be supplied as part of a mixed load**
